Dear Ms. Peterson

I am writing you to express my interest in becoming a Hardware Engineering intern with Pure Storage. I will receive my Bachelor of Science degree in Computer Science from Stony Brook University in June 2019. My goal upon graduation is to become a successful Software or Hardware Engineering in the IT field.

During my high school and college years, I have many experiences in the hardware engineering field. I was the Head of Engineering in my high school's robotics team, which hardwires the robot with code and other components. This definitely suits the requirement of understanding of electrical signaling and semiconductor device. As a leader, I always cooperate with my teammates to get the work done, and if there occurs a problem, I am relied on for solving them.

I am experienced in programming languages like Python and C, and with multiple debugging skills, I am confident that I am suited for understanding the scripting language that is used during the internship. That experience comes from various Hackathons which I have coded a few program using the language you have mentioned in the internship requirements.

I am looking forward to discussing my qualification with you. Please feel free to contact me either at (917)282-6558 or xiangli1997@gmail.com.

Sincerely,

Xiang Li
